Profile

Software Developer with 3+ years building production Generative AI systems end to end at an early stage AI recruitment startup. Experienced in agentic voice AI, LLM evaluation pipelines with OpenAI and Anthropic, and serverless AWS, alongside React, TypeScript, and Python. Focused on auditable, cost efficient, and reliable AI systems.

Experience

Team Geek Solutions Jul 2023 – Present
Software Developer *Remote*

- Architected a **provider agnostic agentic voice AI platform** automating **800+ weekly screening calls**, with DB config driven vendor APIs, payloads, and webhooks enabling **zero code deploy** onboarding.
- Built an **OpenAI LLM screening evaluator** turning call transcripts into **auditable hiring decisions** via **structured outputs** on a 7 field schema, with citation grounding and guardrails against unsupported rejections.
- Redesigned **AI resume screening**, benchmarking Claude, OpenAI, and Azure Document Intelligence to collapse **3 vendors and 5 model calls into 1 cached structured call**, **cutting cost 54 to 75%** at 1,500 resumes monthly.
- Built an **AI proctoring engine** combining browser eye and face tracking, 6 signal server side analysis, and Claude narration, raising cheating detection accuracy from **70% to 91%** across **8,000+ evaluations**.
- Made LLM services production reliable via versioned prompts, **golden set regression evals**, schema validation with retries, and per call **token, latency, and cost tracking**.
- Automated assessments with **Claude question generation**, OpenAI answer processing, and sandboxed grading across **40+ languages**, eliminating **200+ manual hours monthly**.
- Built **containerized full stack coding environments** with live test validation, browser terminal, file explorer, and auto teardown, cutting setup from **3 hours to 20 minutes** for **500+ candidates**.
- Built real time analytics dashboards with advanced filtering and a **UI component library used across 4 products**, reducing feature delivery time **30%**.
- Owned a serverless backend of **200+ AWS Lambda functions** behind API Gateway with S3 and **CodePipeline CI/CD**, serving **5 React and TypeScript frontend apps**.

Team Geek Solutions Jan 2023 – Jul 2023
Technical Intern *Remote*

- Built end-to-end UIs with React, MUI, and a **reusable 20+ component library**, with **Redux Toolkit** state management.
- Developed a **micro-frontend architecture** using **Webpack Module Federation** across **3+ independent apps**.
- Designed **5+ serverless functions** on **AWS Lambda and API Gateway**, handling frontend to backend integration.
- Worked with senior engineers on **production system design**, debugging distributed services and optimizing API consumption for performance.

Samagra Foundation Jun 2021 – Aug 2021
Web Development Intern *Remote*

- Built an **Internship Portal** with **6+ routes** including admin panel, resume builder, chat, and application filtering.
- **Led a team of 5 interns** on front-end development using HTML, CSS, and JavaScript.

Projects

Twofold – AI Personal Finance Platform [GitHub] [Live Demo] Oct 2026
Next.js, TypeScript, FastAPI, PostgreSQL (pgvector), Gemini, RAG, DistilBERT, scikit-learn

- AI personal finance app on a **double-entry ledger** with **receipt scanning**, **auto-categorization**, bank statement reconciliation, budgets and **unusual-spend alerts**, **cash-flow forecasts** with a "Can I afford it?" check, a goal-based **investment planner**, and an **AI copilot** that answers with cited transactions.

Fitmind AI [GitHub] [Live Demo] Aug 2026
React, TS, MUI, Zustand, React Query, FastAPI, MongoDB, Gemini & Groq (LLM + Whisper)

- Voice-first AI fitness coach using **Whisper speech to text** and **LLM based mood/energy analysis** to generate personalized daily workouts, with **streaming LLM chat** and automated weekly recaps.

Skills

Applied AI	OpenAI & Anthropic APIs, Agentic Workflows, Voice AI Agents, LLM Evaluation, Structured Outputs, RAG & Hybrid Search, Tool Calling, Prompt Engineering, Prompt Caching
Languages	Python, TypeScript, JavaScript, HTML, CSS
Frontend	ReactJS, NextJS, Redux Toolkit, Zustand, React Query, MUI
Backend & Databases	FastAPI, PostgreSQL (pgvector, RLS), MongoDB, SQL
DevOps & Cloud	AWS (Lambda, API Gateway, EC2, S3, CodePipeline), Docker, Vercel, GitHub Actions
Tools	Git, Webpack

Education

IcfaiTech, The ICFAI University Aug 2019 – May 2023
Bachelor of Technology - CSE *Jaipur, Rajasthan*

- CGPA - 8.45/10
